

METHOD AND SYSTEM FOR MANUAL ADMISSION
CONTROL WITH USER OPTIONS

ABSTRACT OF THE INVENTION

5 A call manager receives a call setup request for a
Voice over Internet Protocol (VoP) call from a phone
having an associated call originator. The call manager
then determines whether sufficient bandwidth exists for
the VoP call over a link using a bandwidth table. If
10 insufficient bandwidth exists on the link for the VoP
call, the call manager presents a plurality of call
completion options to the call originator. One of the
call completion options is a public switched telephone
network (PSTN) option. In response to the selection of
15 the PSTN option, the call manager routes the VoP call
over a PSTN.
